Report Description

The Internet of Things (IoT) is an operating system that collects data from a device or object using sensors, software, and other technologies. It then connects and delivers it to other devices or objects via the internet. IoT systems have applications in various industries due to their unique flexibility and ability to work in any environment and improve data collection, automation, and operations through smart devices and powerful enabling technology. The IoT's key features are using artificial intelligence, connectivity, active engagement, and small devices.
